CIRCOLARE N 76 DEL 17/10/2023

Al Consiglio di classe della 5 DS

OGGETTO: Progetto Erasmus⁺: «Groundwater, learn to preserve the European underground environment ». Partecipazione al Seminario di Geoscienze Insegnaci Etna 2023 (IIS Benedetto Radice, October 20-22, 2023)

Si comunica che gli studenti P. C. e R. M., nell’ambito della disseminazione attività del progetto Erasmus+ “Groundwater, learn to preserve the European underground environment”, parteciperanno al Seminario di Geoscienze Insegnaci Etna 2023, che si terrà a Bronte presso IIS Benedetto Radice dal 20 al 22 ottobre 2023.

I suddetti studenti in particolare venerdì 20 alle ore 11.00 lasceranno l’aula per recarsi a Bronte dove nel primo pomeriggio (vedi programma allegato n. 1) illustreranno i risultati dell’attività laboratoriale di analisi delle acque effettuata nell’ambito del progetto Erasmus+.

Acireale 17 ottobre 2023.

INSEGNACI ETNA 2023

ANNUAL INTERNATIONAL WORKSHOP

IIS BENEDETTO RADICE
BRONTE - OCTOBER, 20-22

Welcome ! Benvenuti !

Welcome to the 2023 edition of the Insegnaci Etna School!

As you know, this workshop reunites a number of schools from eastern Sicily, an extraordinary area, obviously one of the most fantastic in Europe, for teaching many aspects of the Geosciences directly in the field. And not only about the Etna volcano, but also about earthquakes, tsunami, meteorology, geo-environment, and the relations that exist between all these elements (and hazards) with the people who are living in that area.

We are very happy about the renewed and increasing presence of EduMed, a newly created Observatory (University Côte d'Azur) at Nice, in France. This new Observatory, and its European partners, have largely widened the field of their didactic activity to all aspects of the geosciences (and geo-hazards) in the Mediterranean, now not limited to earthquakes. Etna is, of course, a perfect candidate to bring European teachers and their classes in direct contact with various aspects of geosciences well beyond the seismology-only classes.

Also, thanks to a financial help of the European Geoscience Union (EGU), it has been possible this year to invite 12 teachers from France, Estonia, Greece, Portugal, Romania, Turkey, Spain and the United Kingdom to participate to this school.

We hope that the workshop will favour exchanges among teachers from all Europe, and their will to continue beyond this Field school with exchanges of students and classes. In this exchange the schools of the Etna region are playing a key role because these connexions are taking place and growing within their premises, on the slopes of Etna. We believe that this is an extraordinary opportunity for both the Sicilian and European teachers.

During the first day of the school, you will have several presentations by well known scientists on different aspects of the Etna: its eruptions, the way to survey its volcanic activity and also its vegetation, all different aspects of the « life » of the volcano. We will not forget medicanes and extreme weather episodes in Mediterranean.

In the second day, we will stage the students from the schools who have exploited the data collected by the pedagogical seismometers around the Etna. We will have also the opportunity to follow different practical activities for teachers on earthquakes, with seismo data analysis, with the experiments from « Sismobox », on satellites images to analyse the drought in Mediterranean area.

And the day will end with a presentation of the excursion for Sunday, by the leaders of this field trip. And Sunday we will enjoy all the different aspects of the excursion with many landscapes and outcrops to study!

It will then be the time for a Goodbye! and Arrivederci all'anno prossimo !, sempre più numerosi !

The Organizing Committee of Insegnaci Etna 2023

Ringraziamenti /acknowledgements

We would like to thanks all the person and institutions that have contributed to the organization of Insegnaci Etna 2019 !

First, Mrs Maria Pia Calanna, Headmaster, and all the personnel of the IISS Benedetto Radice, whose warm welcome in their school has been instrumental for the success of this field school! And we do not wish to forget all other persons from this school!

The European Geoscience Union (EGU), whose financial contribution has made possible the participation of European teachers for outside Italy, and thus contributed to the establishment of contacts among teachers on an European scale.

The Instituto Nazionale di Geofisica e Vulcanologia – Osservatorio Etneo Catania, Roma III University, University of Catania and Ecole Normale de Paris for their overall contribution, notably the participation of high-class internationally known speakers.

The EDUMED Observatory (University Côte d'Azur), whose contribution is not only limited to this school, but extends also all year around for discussions and installation of new instruments.

And we thanks all the researchers and teachers who have contributed to this educational workshop and their institutions!
